

EDUCARE

INSTITUTE OF DENTAL SCIENCES

About Us

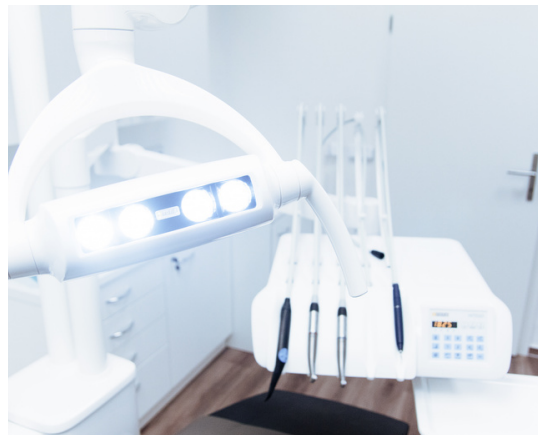

All departments at EIDS have exclusive state-of-the-art clinical facilities.

Catering to all age group we have a team of doctors and supporting staff who can give you the information about the treatment for you.

Every department has a separate entrance and access to instruments and materials.

Exclusive sterilisation rooms, and separated work stations for PG students are other highlights.

We are proud to have the best facilities the state of Kerala has to offer.

CBCT

The latest digital imaging CBCT machine at EIDS capable of giving excellent radiographic interpretation helps to provide accurate diagnostics for proper dental care and treatment.

Fast track Clinic

This clinic offers specialised treatment facility and exclusive care for people needing special requirements. We offer fast track treatment and consultation facility with individual cubicle facility.

departments**

Mobile Clinic

As part of the community outreach programme we have a fully equipped with Mobile Dental Van which also gives an opportunity to increase the clinical exposure to students. The facility is used for awareness creation about dental care and hygiene besides providing treatment in rural areas and settlement of people belonging to the indigenous communities.

Satellite Clinics

Educare Institute has been serving the community since its inception. We have conducted several dental health and awareness programs at the school and community-level dental health check-up camps. We have two satellite clinics set up to access rural areas. We are also an active participant in the Mandhahasam, a program for senior citizens to complete dentures initiated by the Government of Kerala. We have adopted a village as part of the programme. The students of EIDS are active participants in all these programmes and that helps in augmenting their knowledge base as well as exposure to community needs.

Centralised Lab

We have already established a centralised lab using digital technology realising that digital technology is going to play a major role in the future of dental care and treatment.
